[Prowlarr](#) is a free and open-source search aggregator for the torrent and Usenet peer-to-peer networks. Search through multiple sources using one unified interface. Prowlarr can perform manual searches or integrate with other apps to perform automatic searches.

- Connects with [Radarr](#), [Sonarr](#), [Lidarr](#), [Readarr](#), [Mylar](#), and [LazyLibrarian](#).
- Manage your sources and perform searches from a central location.
- Send downloads directly from the search results to your torrent or Usenet server.
- Receive notifications about downloads and server updates.

# Media

## Screenshots

Prowlarr v1.30.2.4939

# Setup & Configuration

We need to install the service through Portainer and configure any necessary settings.

# Preparation

There are some things we need to do in preparation to install this service.

## Volumes

### Persistent Data

This is where the service will store its own application data and ensures we can quickly update the service image.

Ensure your user has permissions to access the folder.

### Download Folders

This service will need access to the folder where you torrent or usenet folder store their completed downloads.

Ensure your user has permissions to access the folder.

## Environment

### TZ

This is the current time zone formatted using the [tz database](#).

*For example: America/Vancouver*

## **PUID**

This is the numeric ID of the user account on Debian. If you are unsure, open a terminal and run:

```
id -u
```

## **PGID**

This is the numeric ID of the user account's group on Debian. If you are unsure, open a terminal and run:

```
id -g
```

# Installation

The service can be installed through the Portainer web interface.

Learn about [creating a new stack](#).

## Docker Compose

Use the following code to install the service:

```
---
services:
  prowlarr:
    image: lscr.io/linuxserver/prowlarr:latest
    container_name: prowlarr
    network_mode: bridge
    environment:
      - PUID=1000
      - PGID=1000
      - TZ=America/Vancouver
    volumes:
      # Persistent Data
      - /srv/prowlarr:/config

      # Downloads Folder
      - /mnt/downloads:/mnt/downloads
    ports:
      - 9696:9696
    restart: unless-stopped
```

# Updating

## Re-Deploy the Stack

Prowlarr has been optimized for running in Docker thanks to [LinuxServer.io](https://linuxserver.io).

This allows you to [re-deploy the stack through Portainer](#) to download the latest updates.

# User Manual

# Development

This software is released under the [GPL-3.0 license](#).

The software was developed as a fork of [Sonarr](#). Prowlarr is made available for Docker through the efforts of [LinuxServer.io](#) and their commitment to simplifying self-hosting.

You can learn more about how to contribute to Prowlarr through their [documentation](#).

The Prowlarr development team also accepts [donations](#).
