

Overview

[Sonarr](#) is a free and open-source media management tool that can automatically download, organize and manage your television and anime collection. Organize your existing collection, add new shows from the [TVDB](#) or import lists to keep up-to-date. Always be sure that your media has the correct metadata for your [Plex](#) or [Jellyfin](#) media server.

- Connects to [Prowlarr](#) to aggregate Usenet and Torrent queries to multiple sources into one unified search result.
- View all of your upcoming shows on a calendar and export it for your calendar app.
- Perform automatic searches to find media within your specifications, or manually search through the results.
- Blacklist any failed downloads and Sonarr will search for a different download.
